Frequently Asked Questions

*The previous FAQ for waste heat projects
has been revised to state:*

Project Eligibility Questions

1. “Renewable energy resources” are defined to include “waste heat recovery”. Must the source of the heat be from renewable sources, or can it include diesel, coal or natural gas?

If the waste heat is currently being wasted, then the project is eligible. Renewable energy funding will be allocated only to portions of new and existing fossil fuel systems that are required for the capture and distribution of heat.
